

JSON Activity

15 points

Create a project **jsonActivity**.

- 1) Write a **Student** class similar to the Employee class in the JSON assignment example.
- 2) Create a class **StudentWriter** that creates an instance of the Student class and writes it to a new JSON file (*students.json*).
- 3) Create a class **StudentReader** that reads the JSON file and prints the student info from it.

Submit the **zipped project** folder to Canvas.
